

Rival Brief Sample #1 — Freeze your scheduling packaging: Calendly vs Cal.com vs SavvyCal (as of 2026-09-02)

As of: 2026-09-02 HST (pages fetched live 2026-09-02 evening HST / 2026-09-03 UTC).

Browser pass: Chrome, rendered cards, 2026-09-02 evening HST / 2026-09-03 UTC — Monthly/Annual clicked on all three; Calendly Plus toggle; Cal.com per-card YEARLY toggles; SavvyCal comparison scrolled. Screenshots in the visual evidence appendix.

Not legal advice, pricing advice, or a buy recommendation. Public pages only. No login. No checkout.

Executive Decision Layer

This brief is not about which scheduler to buy. It is about which **packaging shape** to lock in for your own product.

Recommended structure: let individual users get real value from a useful free plan. Charge when a company needs team scheduling features such as **round-robin** (RR — meetings distributed across a team) and centrally managed events. Keep enterprise security features such as **single sign-on (SSO)** in a higher tier rather than forcing small teams into an expensive enterprise plan.

That is the Cal.com Cloud shape on cal.com/pricing as of 2026-09-02. **Do not** copy Calendly's enterprise plan that starts at 50 seats. **Do not** copy SavvyCal's paid-only two-plan ladder unless you are intentionally **not** running **product-led growth (PLG)** — users try the product before talking to sales.

- **[INFERENCE]** copy this shape when freezing packaging for a 5–25 person B2B company.
- **[FACT]** this is how Cal.com Cloud is packaged on cal.com/pricing as of 2026-09-02.

How they charge [FACT]: per host seat / per user who connects a calendar. People who book meetings (invitees) are free. All three pricing pages work this way. Do not lock in a platform-fee plus per-seat hybrid; none of these three print one.

Strongest evidence [FACT]

1. **A useful free plan vs a thin free plan.** Cal.com Free forever (1 user): unlimited event types **and** calendars. Calendly Free: **1 event type, 1 calendar**. Unlimited types start at Calendly Standard.
2. **Round-robin on the first paid team plan vs Calendly's second paid tier.** Cal.com Teams **\$12 /user/mo yearly** (\$16 monthly) includes round-robin plus managed/collective events. SavvyCal Basic **\$10 /user/mo** Annual (\$12 monthly) includes Collective / Round Robin / Group (screenshot comparison). Calendly round-robin is **Teams and Enterprise only** — after Standard **\$10 /seat/mo yearly** (\$12 monthly), now **visible on the rendered card**. Collective meetings are on Standard; **team distribution** is not.
3. **Calendly Enterprise starts at \$15k /yr, 50 seats, USD only** (calendly.com/pricing).

Biggest trap: copying a 50-seat SSO minimum. Calendly's public SSO path is that Enterprise minimum or an **unpriced** Teams SSO add-on. **[FACT]** \$15k / 50 seats is printed. **[INFERENCE]** a 5–25 person team cannot buy a 50-seat minimum. If you need compliance, copy Cal.com's Organizations-style **public** tier — **SAML** (Security Assertion Markup Language, a common SSO standard) / **SCIM** (System for Cross-domain Identity Management, automated user provisioning) / HIPAA at **\$28 /user/mo yearly, \$37 monthly** — or a sales-led Enterprise plan **without** a 50-seat minimum as the only path.

Public team price band — their list prices, not your price. Plans that include round-robin / team scheduling. Chrome Monthly/Annual toggles clicked.

Plan / tier	Yearly / Annual	Monthly
SavvyCal Basic (round-robin included)	\$10 /user/mo · “Save 2 months”	\$12 /user/mo
Cal.com Cloud Teams (round-robin + managed events + remove branding)	\$12 /user/mo · “Save 25%”	\$16 /user/mo
Calendly Teams (round-robin + admin)	\$16 /seat/mo · “Save 20%”	\$20 /seat/mo
SavvyCal Premium (custom domain + hide branding + payments)	\$17 /user/mo · “Save 2 months”	\$20 /user/mo

Do **not** lock a **core team** plan through Cal.com Organizations **\$28 /user/mo yearly** (\$37 monthly) or Calendly Enterprise **\$15k/yr · 50 seats** without a written reason. Do **not** lock an **individual** paid plan above Calendly Standard **\$10 /seat/mo yearly** (\$12 monthly) without a reason; Cal.com already covers the individual job at **\$0**.

Biggest remaining uncertainty. Monthly toggles are **closed** (all seven target dollar amounts on-card). Remaining: **yearly Standard Plus \$ UNKNOWN** (Plus clicked on monthly view only; not recaptured on annual; do not infer \$18). **Calendly Teams SSO add-on \$ UNKNOWN / sales-gated**. Yearly Teams Plus **\$24 /seat/mo billed annually (1–30 seats)** is still official help, not a /pricing recapture this pass. Monthly Plus (Notetaker & Callie ON): Standard Plus **\$24 /seat/mo**, Teams Plus **\$32 /seat/mo**.

What to do next: Freeze packaging to the Cal.com Cloud shape: keep a useful free plan for individuals; charge when the company needs team scheduling (round-robin and managed/collective events); put enterprise security such as single sign-on in a higher public tier. Do **not** freeze a 50-seat Enterprise minimum as the SSO path. Do **not** freeze a paid-only two-plan ladder unless you are intentionally not running product-led growth (PLG). Use the public team price band above as a reference band only — their list prices, not your price.

1. Who this is for

You are the founder or Head of Product at a 5–25 person B2B software company about to lock in **your** scheduling packaging — which plans you offer, how you charge, what sits on the free plan vs paid plans, and what public list-price band you should not ignore.

This is not “which scheduler should we buy.” It is: do we copy **Calendly’s seat ladder with a Plus add-on and a 50-seat Enterprise minimum**, **Cal.com Cloud’s free-individual / paid-team split** (with self-host as a different product), or **SavvyCal’s two paid plans with no standing free plan** — and what must stay available early if a 5–25 person B2B team is supposed to convert.

2. Method

- **Sources:** vendor pricing pages, official help/docs, and official security/legal pages. No login walls. No logged-in surfaces. No checkout. No third-party price blogs (UseCarly, Costbench, Zeeg, meetergo, wf.savvycal.com stale mirror) as price or feature sources.
- **Billing toggles (Chrome, 2026-09-02 HST):** Calendly **Billed yearly / Billed monthly** radios clicked; “Add Notetaker & Callie” clicked on the monthly view. Cal.com **per-card YEARLY** toggles (both ON by default) clicked OFF for monthly. SavvyCal **Monthly | Annual** pill clicked. Monthly dollar amounts below are **printed on the rendered cards**, not computed from a savings badge. Screenshots in the visual evidence appendix.
- **Cal.com Cloud vs self-host:** never averaged. Cloud plans from cal.com/pricing. Self-host/community edition from cal.com/docs/self-hosting/license-key (last updated 2026-07-09).

- **UNKNOWN / sales-gated** means the public page did not print the number or the plan. It does not mean the feature is absent.
- Public sources only; researched and written for Rival Brief on 2026-09-02 HST.

Verification notes (so you can audit the dollar amounts):

- **Calendly Standard \$10 yearly** is **visible on the rendered card** (Save 17%; [calendly-annual.png](#)) — no longer JSON-LD-only. Teams \$16 yearly + Save 20% on-card. Enterprise “Starts at \$15k /yr” on-card ([calendly-enterprise.png](#)).
- **Calendly monthly** (Notetaker OFF): Standard **\$12 /seat/mo**, Teams **\$20 /seat/mo** ([calendly-monthly.png](#)).
- **Calendly Plus** (monthly view, Notetaker & Callie ON): card titles Standard Plus **\$24 /seat/mo**, Teams Plus **\$32 /seat/mo** ([calendly-plus.png](#)). **Yearly Standard Plus \$ UNKNOWN** (Plus not recaptured on annual; do not infer \$18). Yearly Teams Plus **\$24 /seat/mo billed annually (1–30 seats)** remains the official help figure — not recaptured on /pricing this pass.
- **Cal.com monthly** (YEARLY toggles off): Teams **\$16 per user/month**, Organizations **\$37 per user/month** ([calcom-monthly.png](#)). Yearly remains Teams **\$12** / Organizations **\$28** ([calcom-yearly.png](#)).
- **SavvyCal Annual**: Basic **\$10/user/mo**, Premium **\$17/user/mo**, “Save 2 months” ([savvy-cal-annual.png](#)). Monthly: Basic **\$12/user/mo**, Premium **\$20/user/mo** ([savvy-cal-monthly.png](#)). 30-day money back visible above the cards. Comparison features from [savvy-cal-comparison.png](#) (not a search-index table). The older [wf.savvy-cal.com](#) \$12 / \$20 page is **stale** and is not used.

3. Data-verified matrix

Every cell: **value · billed period · URL · as-of 2026-09-02.**

Cal.com column is **Cloud** unless the row says Cal.diy / self-host.

4. Packaging philosophy (how they make money)

Calendly — seat ladder + AI upsell + Enterprise minimum. Free is a one-link demo (1 event type, 1 calendar). Standard (\$10/seat/mo yearly, \$12 monthly) sells the individual power-user: unlimited event types, six calendars, payments, collective/group, remove branding. Teams (\$16 yearly, \$20 monthly) sells the **conversion job for a sales/CS team**: round-robin, routing, admin-managed events. Plus plans (Notetaker + Callie) sit **on top of** Standard/Teams rather than inside them — AI is a second meter, not the scheduling core. Enterprise is not a feature pack for a 20-person company: it is a **\$15k/yr, 50-seat, USD-only** procurement product (SSO, domain control, audit, Salesforce lookup). Invoice even on Standard/Teams starts at \$5,000. They make money when a team hits round-robin, then again if the team wants notes, then again if IT wants SSO.

Cal.com Cloud — give the individual the product; charge the team; charge again for org security. Free forever is a real individual plan (unlimited event types and calendars, payments, CRM sync). Money starts at **collaboration** (Teams \$12/user/mo yearly, \$16 monthly: RR, managed events, remove branding). The expensive public tier is **Organizations \$28/user/mo yearly, \$37 monthly** for SAML/SCIM, company subdomain, HIPAA/SOC2/ISO — not for round-robin. Enterprise is custom/annual/sales. **Cal.diy is not a cheap Cloud**. It is a community MIT fork without teams/SSO; commercial on-prem is sales. Mixing “Cal.com is free to self-host” into Cloud pricing is a category error.

SavvyCal — two paid plans, no Free plan, team features on the first dollar. Basic \$10/user/mo Annual (\$12 monthly) already includes unlimited links/calendars **and** collective/round-robin/group. Premium \$17 Annual (\$20 monthly) is not “teams”; it is **polish and commerce**: custom domains, hide branding, Stripe, assistant delegate. They make money the first time someone activates (30-day money-back, no standing Free). The Premium gap is branding/payments, not routing. There is no public Enterprise/SSO tier — a 5–25 team never hits a sales wall because the wall is not on the page.

5. What a 5–25 person B2B team actually hits

A 5–25 person B2B team converting scheduling typically needs: more than one meeting type, more than one calendar, round-robin or collective for sales/CS, someone who is not the founder administering event templates, and a booking page that does not look like a consumer trial. SSO/HIPAA are **not** the week-one trial killers unless the buyer is IT-led or clinical.

Calendly trial-killers

1. **Free is unusable as a team trial.** One event type + one calendar. The help page says so. A 5-person sales team hits this on day one.
2. **Round-robin is the second paid tier** (Teams \$16 yearly / \$20 monthly), not Standard \$10 yearly / \$12 monthly. Collective exists on Standard; **distribution** does not. If your analogue of RR is the conversion feature, Calendly trains buyers to skip Standard.
3. **SSO is not a self-serve Teams feature on the pricing page.** It is Enterprise (\$15k/yr, 50 seats) or an unpriced Teams add-on. A 15-person company **cannot** buy the public Enterprise minimum (50-seat minimum). That is the freeze lesson: do not copy a compliance plan your ideal customer cannot purchase.
4. **AI is a named extra plan** (Plus). Fine — unless your checkout defaults to Plus and yearly Standard Plus \$ is still unprinted.

Cal.com Cloud trial-killers

1. Almost none on the individual path. Free is the product for one user.
2. **The first paid wall is the right wall:** Teams for round-robin/managed events/branding at \$12 yearly / \$16 monthly.
3. **The second paid wall is steep for 5–25:** Organizations \$28 yearly / \$37 monthly for SSO/HIPAA/subdomain. A 15-seat org is **\$5,040/yr** at yearly list ($15 \times \$28 \times 12$) or **\$6,660/yr** at monthly list ($15 \times \$37 \times 12$). If you copy this split, do not tell a 10-person team that “security is included.”
4. **Self-host is not the escape hatch** for a 5–25 SaaS. Cal.diy has no teams. Commercial on-prem is sales.

SavvyCal trial-killers

1. **No Free plan.** Conversion is trial → paid. “Kick the tires for free” + 30-day money back is not Cal.com’s free-forever.
2. **Team scheduling is not held back.** Round-robin/collective sit on Basic. A sales team can convert at \$10/user/mo Annual / \$12 monthly.
3. **Branding/custom domain/payments are the Premium wall** (\$17 Annual / \$20 monthly). If your ideal customer shares booking links with customers, hide-branding on the **second** tier is the SavvyCal tax. Calendly and Cal.com sell hide-branding **with** the first serious paid plan (Standard / Teams).
4. **SSO/SOC2/HIPAA UNKNOWN.** If your buyer’s security questionnaire requires printed SSO, SavvyCal’s public page does not close it.

6. Freeze recommendation (commit)

Recommended structure for a 5–25 person B2B product: usable free (or near-free) plan for individuals → first paid plan = team scheduling (round-robin / managed events) → organization / SSO as a later public tier. That is Cal.com Cloud’s shape — not Calendly’s 50-seat Enterprise minimum, and not SavvyCal’s paid-only two plans unless you are explicitly not a product-led growth (PLG) motion.

Labeled so you can argue with it:

Decision	Verdict	FACT vs INFERENCE
Value metric	Freeze per host seat / per user who connects a calendar . Invitees free. All three public pages do this. Do not freeze a platform fee + per-seat hybrid; none of these three print one.	FACT (all three pricing pages).
What belongs on Free	If you want product-led growth: unlimited event types + more than one calendar . Optionally payments (Cal.com). Do not copy Calendly Free (1 type / 1 calendar) unless Free is a demo you are willing to lose teams on. Do not put round-robin on Free (none of the three do).	FACT on what each Free plan includes. INFERENCE that 1-and-1 Free kills a 5–25 trial.
Where team features sit	First paid team plan : round-robin, collective, admin-managed templates. That is Cal.com Teams and SavvyCal Basic. Do not copy Calendly's two-step paid climb (Standard then Teams) if RR is the conversion feature.	FACT on who puts round-robin where. INFERENCE that round-robin is <i>your</i> conversion feature — true for most B2B sales/CS schedulers, not for a consumer 1:1 tool.
Add-on vs included	AI notes : add-on / Plus (Calendly). Do not bake into core scheduling. Hide branding : include on the first paid plan you expect a company to share (Calendly Standard, Cal.com Teams) — SavvyCal's Premium placement is the one to avoid if customer-facing links matter. Payments : do not use as the paid hook for B2B (Cal.com gives them away; SavvyCal sells them). SSO/SCIM : later tier, self-serve if you sell to 5–25 .	FACT on who puts what where. INFERENCE on which placements you should copy.
SSO / Enterprise	Do not copy Calendly's public Enterprise minimum (starts \$15k/yr, 50 seats, USD only). A 5–25 team is structurally excluded. If you need a compliance plan, copy Cal.com's Organizations-style public tier (SSO/SCIM/HIPAA printed at \$28/user/mo yearly / \$37 monthly) or a sales-gated Enterprise without a 50-seat minimum printed as the only path. Calendly's "SSO add-on on Teams" is unpriced — do not freeze an unpriced add-on as if it were a published plan.	FACT on published minimums. INFERENCE that 5–25 buyers cannot clear a 50-seat min.
Self-host	If you offer self-host, name it as a different product (Cal.com's Cal.diy vs Cloud). Do not average it into SaaS list price. Do not advertise "free self-host" if teams/SSO are commercial-only.	FACT from Cal.diy docs.

Public list-price band you should not freeze through without a reason — expressed as these three's public prices, not "you should charge \$X."

For a **5–25 person B2B team plan** (the thing that includes round-robin / team scheduling):

Plan / tier	Yearly / Annual	Monthly
SavvyCal Basic (round-robin included)	\$10 /user/mo · savvycal.com/pricing	\$12 /user/mo
Cal.com Cloud Teams (round-robin + managed events + remove branding)	\$12 /user/mo · cal.com/pricing	\$16 /user/mo
Calendly Teams (round-robin + admin)	\$16 /seat/mo · calendly.com/pricing	\$20 /seat/mo
SavvyCal Premium (custom domain + hide branding + payments)	\$17 /user/mo · savvycal.com/pricing	\$20 /user/mo

Do not freeze a core team plan through Cal.com Organizations **\$28 /user/mo yearly** (\$37 monthly) or Calendly Enterprise **\$15k/yr · 50 seats** without a written reason. Those are **org-security / procurement** plans, not team-scheduling plans.

Do not freeze an individual plan above Calendly Standard **\$10 /seat/mo yearly** (\$12 monthly) without a reason; Cal.com already does the individual job at **\$0**.

Sales-gated (flag, do not freeze as self-serve): Calendly Enterprise; Cal.com Enterprise (Custom, annual); Cal.diy commercial on-prem (cal.com/sales); Calendly Teams SSO add-on \$; Calendly yearly Standard Plus \$; invoice (Calendly Standard/Teams from \$5,000). SavvyCal has **no public Enterprise**.

7. What would change the rec

- **Calendly** prints SSO/SCIM on Teams at a self-serve \$ and drops the **50-seat / \$15k** minimum → the “don’t copy Enterprise” warning weakens; you could copy a Teams+SSO bundle.
- **Calendly Free** gets unlimited event types (or even 3+) → Calendly’s Free stops being a demo; the “copy Cal.com Free” argument weakens.
- **Calendly** makes Standard Plus the default checkout **and** still does not print **yearly** Standard Plus \$ → do not copy an opaque Plus default.
- **Cal.com** moves round-robin onto Free → first paid plan must be something else (branding, admin, SSO); the \$12 / \$16 Teams story changes.
- **Cal.com or SavvyCal monthly/yearly printed \$ move** → re-fetch the band; architecture rec is unchanged as long as round-robin still sits on the first paid team plan.
- **SavvyCal** publishes a standing Free plan, or moves round-robin to Premium, or adds a public SSO/Enterprise price → two-plan simplicity (or its ideal customer) changed.
- **Cal.diy** ships Teams/SSO in the MIT edition → self-host becomes a real Cloud competitor; today it is not.

PAGE: Ship this Monday

Paste into Notion. **Not your list price** — competitor public list, not your price. Monthly dollar amounts are Chrome-clicked facts, not Save-% math.

Recommended packaging [strategic inference — validate with customers]: Cal.com Cloud shape — Free / Individual → Team (conversion) → Organization / Security (later) → optional AI add-on.

How to charge on every tier [evidence-derived]: per host seat / per user who connects a calendar.

Invitees free. All three pages. Do not invent a buyer price from this band. Use the band as a check against *their* list; pick *your* number after customer validation.

Plan / tier	User type	Purpose	Major features to place	How you charge	Suggested competitive reference band (evidence-derived competitor list, as-of 2026-09-02)
Free / Individual	Solo host / founder / product-led trial. Cal.com Free = 1 user .	Usable individual product, not a one-link demo.	On Free: unlimited event types + >1 calendar. Payments optional (Cal.com Free: Stripe & PayPal). Not on Free: round-robin (none of the three put it there); hide branding (Calendly Standard / Cal.com Teams).	Per user who connects a calendar. Invitees free.	Cal.com Free \$0 . Calendly Free \$0 (but 1 type / 1 calendar). If you <i>sell</i> an individual paid plan, do not freeze it above Calendly Standard \$10 /seat/mo billed yearly (\$12 monthly) without a written reason. SavvyCal: no standing Free plan (30-day money back visible).

Plan / tier	User type	Purpose	Major features to place	How you charge	Suggested competitive reference band (evidence-derived competitor list, as-of 2026-09-02)
Team	5–25 person B2B sales / CS team. Conversion plan.	Team distribution — the job Calendly sells on the <i>second</i> paid tier.	Put here: round-robin, collective, admin-managed templates, remove branding. Not here as the only SSO path: SAML/SCIM/HIPAA (next tier).	Per host seat. Invitees free.	Yearly / Annual: SavvyCal Basic \$10 /user/mo (round-robin included). Cal.com Teams \$12 /user/mo (round-robin + managed events + remove branding). Calendly Teams \$16 /seat/mo (round-robin + admin). SavvyCal Premium \$17 /user/mo (polish/commerce — not the round-robin placement). Monthly: SavvyCal Basic \$12 · Cal.com Teams \$16 · Calendly Teams \$20 · SavvyCal Premium \$20 . Do not freeze a core team plan through Cal.com Organizations \$28 /user/mo yearly (\$37 monthly) or Calendly Enterprise \$15k/yr · 50 seats .
Organization / Security	IT-led or compliance buyer. Not week-one unless the deal is questionnaire-led.	Printed SSO/compliance. Later tier; keep it public if you sell to 5–25.	Put here: SAML SSO, SCIM. Cal.com Organizations: “SOC 2, HIPAA, ISO 27001 compliant” + yourcompany.cal.com. Do not copy: Calendly Enterprise \$15k /yr · 50 seats · USD only as the only SSO path; Calendly Teams SSO add-on is unpriced / sales-gated . SavvyCal SSO/SOC2/HIPAA UNKNOWN on /pricing.	Per user (Cal.com Organizations cards).	Cal.com Organizations \$28 /user/mo yearly / \$37 monthly = only <i>public printed</i> compliance tier of the three. Calendly Enterprise \$15k /yr · 50 seats = procurement, not a 5–25 self-serve plan. Cal.com Enterprise = Custom / “Talk to sales” (no public floor \$).
Optional AI add-on	Seats that want notes / voice on top of scheduling.	Second meter. Do not bake AI into the core scheduling plan.	Calendly Notetaker + Callie = Standard Plus / Teams Plus (English only). Enterprise: inquire. Cal.com meeting notetaker not listed on /pricing (Cal.ai is a separate nav product). SavvyCal AI not listed on /pricing.	Per seat (Plus sits on Standard or Teams).	Monthly view (Plus ON): Standard Plus \$24 /seat/mo, Teams Plus \$32 /seat/mo . Yearly Teams Plus \$24 /seat/mo billed annually (1–30 seats) (official help — not recaptured on /pricing this pass). Yearly Standard Plus \$ UNKNOWN — not recaptured on annual; do not infer \$18.

Labels (read with the table)

Plan / tier	Evidence-derived (page)	Strategic inference — requires customer validation
Free / Individual	Features + \$0 / \$10 yearly / \$12 monthly (Calendly Standard)	Unlimited types on Free so a 5–25 team can trial (do not copy Calendly 1-and-1 unless Free is a demo you will lose teams on).
Team	Who places round-robin; yearly band \$10 / \$12 / \$16 / \$17 ; monthly band \$12 / \$16 / \$20 / \$20	Round-robin is <i>your</i> conversion feature → first paid team plan. Do not copy Calendly Standard-then-Teams.
Organization / Security	Who prints SSO; \$28 yearly / \$37 monthly vs \$15k / 50 seats	A 5–25 buyer cannot clear a 50-seat min. Keep SSO self-serve if that is the ideal customer. Do not freeze an unpriced add-on as a published plan.

Plan / tier	Evidence-derived (page)	Strategic inference — requires customer validation
Optional AI add-on	Plus is a named extra; monthly Standard Plus \$24 / Teams Plus \$32 ; yearly Teams Plus \$24 (help); yearly Standard Plus UNKNOWN	Keep AI an add-on, not the scheduling ladder.

Also do not: invent a buyer price from this band · average Cal.diy / self-host into Cloud list (MIT community; no teams/SSO; commercial on-prem = sales) · treat sales-gated as self-serve (Calendly Enterprise; Cal.com Enterprise; Cal.diy commercial; Teams SSO add-on \$; yearly Standard Plus \$; Calendly invoice from \$5,000).
